
(a) Convolutional U-Net
Input volume
Class scores
Conv. features
Conv. features
Conv. features
Conv. features
Coarse features
Downsampling and upsampling with multiscale skip connections
Used by the U-Net and configured nnU-Net baselines
(b) UNETR
Input volume
3D patch embedding
Global self-attention
Fixed token grid
Layer-wise features
Convolutional decoder
Dense class scores
Global token interactions at a fixed encoder resolution
(c) SwinUNETR
Input volume
Window / shifted-window attention
Patch merging
Coarser windowed features
Convolutional decoder
Dense class scores
Local attention windows and a hierarchy of token grids
