Statement $P(v)$: voxel v belongs to class c
1. Ground the statement
2. Take the logarithm
3. Form the loss
u
$p_c(u) = 0.8$
v
$p_c(v) = 0.9$
$\log(0.8) \simeq -0.223$
$\log(0.9) \simeq -0.105$
Negative mean
$-\frac{\log(0.8) + \log(0.9)}{2}$
$\simeq 0.164$
Two reference voxels of class c
Local log-truths
Equal voxel weights
Higher membership probability gives a smaller local penalty.
